

IT Management & Governance Diagnostic

Get the data you need to start your process improvement journey. Your customized report will highlight your organization's most pressing IT process needs, prioritized by its effectiveness and importance to the business.

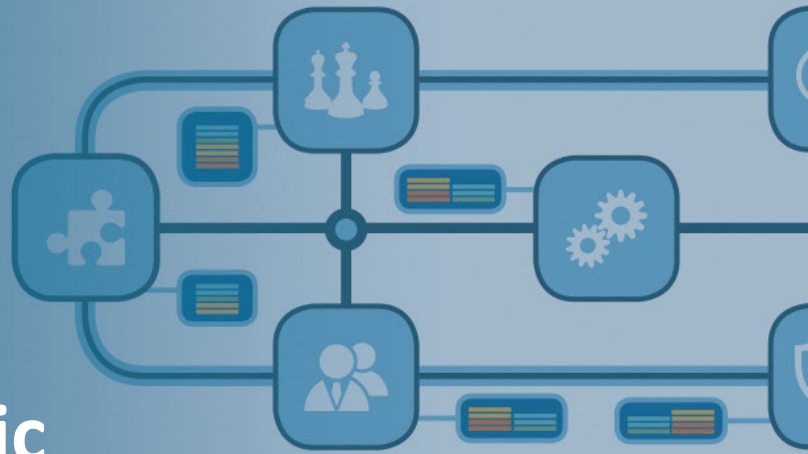

Once a year it just makes sense to analyze your IT departments strengths & weaknesses.

IT Management & Governance Diagnostic

Step 1

Assign process ownership and accountability

World class leaders ensure they have clear process ownership and accountability. They have a name next to each process.

Step 2

Assess department strength and weaknesses

Beyond ownership and accountability, world class leaders analyze their departments strengths and weaknesses on an annual basis and assess which root causes to address and systematically improve the IT department.

Step 3

Annual Roadmap

World class leaders focus on the most important processes that they believe will drive the success of the organization and they build an annual roadmap for improvement. They inspire their team with a vision that involves continual improvement and celebrates each team members impact.

Step 4

Track progress, measure effort and assess the improvement

World class leaders ensure that they keep track of their team's efforts, measure the time and resources dedicated to process improvement and ensure that the business realizes measureable value.
